INSTRUCTIONS:

- This assignment must be conducted in a group. Please clearly write the group members' names & matric numbers on the front page of the submission.
- Solutions for each question must be readable and neatly written on plain A4 paper. Every step or calculation should be properly shown. Failure to do so will result in the rejection of the submission of the assignment.
- This assignment consists of 7 questions (85 Marks), contributing 5% of overall course marks.

STRUCTURES:

- Chapter 3 Part 3: Pigeonhole Problem [10 Marks]
- Chapter 3 Part 4: Probability [25 Marks]
- Chapter 4 Part 1: Graph Theory (until Path and Cycle) [50 Marks]

1st Form k pigeonholes : score (0-100) = 101 $k < n$

Question 1 n pigeon : students

$$101 < n$$

$$n = 102 \#$$

[10 marks]

- How many students in a class to guarantee that at least two students received the same score on the final exam. If the exam is graded on a scale from 0 to 100 points. (5 marks)
- what is the minimum number of students required in a Structure Discrete class so that at least six students will receive the same letter grade (A,B,C,D, or F) (5 marks)

pigeonholes : grade = 5 : m $k = 6$
pigeons : students = ? : n

$$k = \frac{n}{m} \quad k = \frac{n}{5} \quad 6 = \frac{n}{5} \quad n = 30$$

$$25 < n \leq 30 \quad \text{minimum } n = 26 \#$$

Question 2

[25 marks]

The following table gives information on Mobile phone sold by a certain store:

	Percentage of Customers Purchasing	Of Those Who Purchase, Percentage Who Purchase Extended Warranty
Brand 1	$P(O)$ 70	$P(W O)$ 20
Brand 2	$P(T)$ 30	$P(W T)$ 40

A purchaser is randomly selected from among all those bought a mobile phone from the store.

Determine the probability that :

- customer purchased Brand 1. $P(O) = \frac{70}{100} = 0.7$

(2 marks)

$$d. P(W|O) = \frac{P(W \cap O)}{P(O)} \quad P(O \cap W) = P(W \cap O)$$

$$0.2 = \frac{P(W \cap O)}{0.7}$$

$$P(W \cap O) = 0.14$$

$$P(O \cap W) = 0.14$$

$$e. P(W|T) = \frac{P(W \cap T)}{P(T)} \quad P(T \cap W) = P(W \cap T)$$

$$0.4 = \frac{P(W \cap T)}{0.3}$$

$$P(W \cap T) = 0.12$$

$$P(T \cap W) = 0.12$$

b. customer purchased Brand 2 $P(1) = \frac{30}{100} = 0.3$ (2 marks)

c. customer purchase extended warranty given that purchase brand 1. $P(W|O) = 0.2$ (2 marks)

d. customer who bought brand 1 and purchased extended warranty. $P(O \cap W)$ (4 marks)

e. customer purchased brand 2 and extended warranty purchased. $P(T \cap W)$ (5 marks)

f. extended probability purchased. $P(W)$ (5 marks)

g. purchased brand 1 item given that also bought extended warranty $P(O|W)$ (5 marks)

$$f. P(W) = P(W|O)P(O) + P(W|T)P(T)$$

$$= (0.2)(0.7) + (0.4)(0.3) = 0.26$$

$$g. P(O|W) = \frac{P(O \cap W)}{P(W)}$$

$$= \frac{0.14}{0.26} = 0.5385$$
